

# E-Management of Tollgate and Vehicle Tracking System

## Abstract

- The project we proposed “Toll Gate” is a web based application that have complete details of a Toll Gate Company details like Toll gate details, staff details, user details and Fare details of each toll booth and collection details of each toll booth.
- The above aim can be established by implementing a layout structure modules and each module can have many sub modules.
- Admin is responsible for creating all toll gate details, branch details, staff details, user details and Fare details.
- This system is based CMS website Concept. Admin is responsible for giving username and password for user as well as access level. It has user interface module.
- User can login through our site and access the service offered by the admin.
- The Aim of these project is to keep complete details about fare collection and user details.
- User can registered with the site and access the service offered by the admin.
- User will get toll gate pass through our System. It may lead to reduce the access time.
